## SAND HALO

The Sand Halo was designed to eliminate sand and other well materials from settling between the pump barrel and tubing on a bottom hold down rod pumping system.

### Installation

The Sand Halo is installed on any conventional bottom hold down rod pump.

There are no set or release special procedures, just regular pump procedures.

The rubber element adhere to the tubing wall preventing materials from passing.

### Advantages

Help eliminate stuck pumps from sand and well material from settling around pump barrel and tubing, causing stuck pumps and stripping jobs.

Help eliminate cost of stripping job due to a stuck pump, achieving higher well profits and lower maintenance cost per well.

### Sizes Available

2-3/8" & 2-7/8"

Material: Stainless Steel.
